EXECUTIVE SUMMARY

High-performing MERN stack specialist with extensive experience bridging the gap between highly secure, production-grade backends and ultra-premium, interactive user interfaces. Passionate about engineering high-fidelity web applications with state-of-the-art animations, cinematic layouts, and highly-optimized load profiles. Proven track record of transforming traditional business processes into modern global digital platforms.

TECHNICAL EXPERTISE

Frontend Engineering

React 19, Next.js 16 (App Router, Static Export), GSAP (Spatial Animation), Zustand, Zod, Vanilla CSS, Responsive Web Design

Backend & Databases

Node.js, Express.js, RESTful API Design, Token-Based Authentication, MongoDB (Aggregation & Indexing), MySQL, Protected Middleware Architecture

Architecture & Automation

Monolithic & Serverless Deployments, Real-Time Webhooks, Synchronized Booking Engines, Omnichannel Alerts (Twilio SMS, Resend Email)

DevOps & Tooling

Git, GitHub, Vercel CI/CD, Lighthouse Performance Auditing (Targeting 95+ Scores), Vitest Unit & UI Testing, Performance Profiling

SIGNATURE PROJECTS

Falak Hall & Events — Luxury Booking & Venue Platform

Production Ready

Engineered a complete premium digital event booking suite designed for luxury venues, moving offline operations to a lightning-fast cloud architecture.

- Optimized Performance:** Accomplished a near-perfect **98/100 Lighthouse score** utilizing Next.js Server Components and advanced asset-caching techniques.
- Safe Transactional State:** Developed a custom backend booking engine with synchronized transactional locks to eliminate venue double-booking.
- Automated Communications:** Integrated the Twilio API for automated client SMS workflows and the Resend API for immediate admin email delivery.
- Cinematic UI:** Designed a responsive, premium spatial layout integrated with high-performance GSAP micro-animations running at 60fps.

Ahmed Code Studio — Dual-Audience Static Portfolio Platform

Active Platform

Architected and shipped a dual-audience static portfolio: a calm, conversion-focused client landing with SEO case studies, and a separate interactive HUD experience for recruiters — with strict module isolation enforced between the two audiences.

- **Full Static Export:** Configured Next.js output: 'export' — all 7 routes pre-rendered to static HTML at build time; zero client-side data fetching for case study content.
- **Route Isolation Guard:** Vitest regression test recursively audits every file under /client routes and asserts zero imports of HUD-specific modules, permanently preventing audience leakage.
- **Dynamic Case Studies via generateStaticParams:** Statically generated /client/work/[slug] pages for each project with unique generateMetadata and canonical URLs per route.
- **Shared Contact Layer:** Centralized Zod-validated Web3Forms submission helper (src/lib/contact.ts) consumed by both the HUD modal and the static client form — no logic duplication across audiences.
- **Test Coverage:** 76 unit tests across route isolation, contact submission, and component rendering; mocked canvas, ResizeObserver, and matchMedia for jsdom compatibility.

PROFESSIONAL EXPERIENCE

Lead Full Stack Engineer

2024 — Present

Ahmed Code Studio

Providing end-to-end web engineering, systems architecture, and visual design to local and international clients, delivering pixel-perfect production builds with rigorous performance profiling and comprehensive unit testing coverage.

EDUCATION & CREDENTIALS

BS in Computer Science

Software Engineering Core
Focus on Distributed Computing, Database Algorithms, and Frontend Architecture.
